

## Database (DB) Select

### Assessment

INTEREST	TESTER	PROG OFFICE	ENG GROUP	USER	SECURITY	SYS ADMIN
TECHNICAL	X	X				X
INFORMATIONAL	X	X		X		X
FUNCTIONAL		X		X		

**Technical** = requirements **Functional** = enhancements

Developer: SIAC (on-site at the OSF)  
Government POC: MAJ James Quetsch  
SME: 1LT Pete Offerman (JSSC)  
JITC Team: Holly Lund and Luanne Overstreet

#### Assessment Objectives:

This was an assessment of the DB Select functionality on the new operating environment (DII COE 3.0) only. There were no test procedures and the assessment application was not measured against requirements. JITC was present at all times and documented comments and prepared pre-assessment and post-assessment documentation. The user and JITC avoided all comment that may have caused redirection to the scope of the product. JITC was responsible to the Joint Staff and the PMO to bring all issues, questions, comments, and concerns to the appropriate GCCS representative.

#### User Expectations:

Observation of a system that functioned as well as the DB Select currently resident in GCCS v2.2.

#### Assessment Results:

The overall assessment was excellent. The functionality was similar to current application, functions were IAW the requirements, the requirements were satisfactory, and the SME felt that the application should be integrated into GCCS v3.0. There were no additional comments/concerns expressed by the SME.

#### Recommendation:

The SME felt that the application should be integrated into GCCS v3.0.
